SMART ENERGY LIVING PRESENTS ENERGY MAKEOVER TEAM AT SPRING HOME & PATIO SHOW

Smart Energy Living workshops teach homeowners how to save money on energy bills.

Denver Western Complex, 30 minute presentations will be available during these times:

Thur., Mar. 16, 6 -7:30 pm

Sat., Mar. 18, noon-2:30

Sun. Mar. 19, 2-3 pm

LAKESWOOD, CO – Smart Energy Living is the consumer education program of Colorado Energy Science Center (CESC), a non profit energy education organization. Smart Energy Living has partnered with several industry experts to make the process of energy efficiency easier for homeowners.

Learn from Experts, Hear Directly From Homeowners

With energy being a dominant topic in the news, this educational seminar is an opportunity to learn more about the recommended strategies for addressing home energy efficiency, a complete understanding of the benefits in addition to reducing bills and how to calculate return on investment, and what is on the minds of homeowners. Every aspect of the home, and how it works as a system, will be covered. Specific topics include energy audits and quality assurance inspections, insulation, air leakage, windows, window coverings, heating and air conditioning systems, and financing options that lead to a positive monthly cash flow from energy improvements.

Natural Gas: Volatile and Structurally Higher

Natural gas and crude oil prices are some of the most volatile in the market. Regardless of month-to-month price differences, natural gas base prices have skyrocketed in the past few years and experts agree that prices are more likely to increase than decrease over time. U.S. buildings account for one-third of the nation's energy use and one-half of its electricity use. Higher utility costs will continue to affect homeowners, who are in need of ongoing education and resources to help them take the steps towards efficiency.

Home Energy Efficiency Requires Many Steps

We have identified the steps required for an individual homeowner to make their home efficient, and we know that it is often a complicated proposition. That's why we work to find ways of encouraging a team approach to home energy efficiency. During the workshops, we will explain the growing benefits of our collaborative efforts.

More Information

Registration is required and space is limited. More information on the Energy Makeover Team can be found online, <http://smartenergyliving.org/ecm/Workshops/energymakeoversponsors.html>
